YOGURT BENEFITS

YOGURT BENEFITS

# Yogurtland Yogurt

All of our yogurt is proprietary which means that we make our own yogurt! At Yogurtland we make sure that we carry the best products always! We make sure that all of our yogurt is made with real ingredients! And we can taste the difference!

According to FDA Standards for a product to be called “yogurt”, it must be made by combining a dairy product with two specific bacteria:

## **Lactobacillus bulgaricus** **Streptococcus thermophilus**

It is these two bacteria that convert pasteurized milk to yogurt during the fermentation process. The term culture refers to the living organisms that make yogurt, *yogurt*. The process is very similar to that of making cheese. This fermentation process of these two bacteria is what defines yogurt, with its unique tart taste, texture, and associated healthful attributes.

In addition to these two primary cultures, Yogurtland adds additional live and active probiotics to our yogurts. These include:

- **Lactobacillus acidophilus**
- **Lactobacillus rhamnosus**
- **Lactobacillus casei**
- **Bifidobacterium bifidum**

## Probiotics

- Probiotics are edible microorganisms or friendly bacteria that convey a beneficial effect.
- The term “probiotic” was first introduced in 1953 and literally means “for life”.
- New scientific studies of probiotics are being conducted regularly.
- Their beneficial characteristics are still being discovered.

# Yogurt's Healthy Bacteria

Name of Friendly Bacteria	Where it's Found	What it Does
Lactobacillus Acidophilus	Mouth Intestinal Tract	Produces an acid which may help to control the growth of fungus!
Lactobacillus Rhamnosus	Intestinal Tract	Inhibits the growth of harmful bacteria in the intestine
Lactobacillus Casei	Mouth Intestinal Tract	Assists in the spread of desirable bacteria
Bifidobacterium Bifidum	Intestinal Tract	Aids in digestion; associated with lowering incidence of allergies

## Yogurt Culture

In the U.S, yogurt is made by introducing bacteria strains such as *Lactobacillus bulgaricus* and *Streptococcus thermophilus* into milk, which is then fermented under controlled temperatures and environmental conditions. The bacteria consume the natural milk sugars and then give off lactic acid. The increased acidity causes the milk proteins to mesh into a solid mass or curd.

Other lactic acid bacteria strains are sometimes added to yogurts for taste and added health benefits. These include species such as *L. acidophilus*, *L. casei* and *Bifidobacterium*. In most countries, a product may be called yogurt only if live bacteria are present in the final product.

## Yogurt Debut

Historical evidence suggests that cultured milk, as food, had its start about 4,500 years ago. The word yogurt is Turkish in origin. The earliest yogurts were probably fermented unexpectedly from naturally occurring bacteria living in the goat skin bags carried by nomadic people migrating into Europe from parts of western Asia during the second century AD. Today, many different countries and cultures claim yogurt as their own despite no absolute evidence as to its origin.

Around 1900, a Russian biologist named Ilya Ilyich Mechnikov hypothesized that regular consumption of yogurt was responsible for the unusually long life spans of Bulgarian peasants. Believing that the *Lactobacillus* found in yogurt was essential for proper health, Mechnikov attempted to popularize yogurt throughout Europe. In 1919, an entrepreneur named Isaac Carasso, started a small yogurt business in Barcelona and named the business Danone ("little Daniel") after his son. Carasso immigrated to the United States during World War II and set up a business in New York City under an Americanized version of the name - Dannon.

## The NSA Yogurt – No Sugar Added

To give sweetness to our NSA flavors we diligently seek out only the safest and most researched sugar alternatives. Some of these can be found naturally in stone fruits like nectarines and peaches. These sweeteners are a form of soluble fiber and are thoroughly tested and approved by the FDA. These may include Sorbitol, Sucralose, Aspartame, Polydextrose, and Acesulfame Potassium.

### Sugar Substitutes

**Acesulfame Potassium** - 180-200 times sweeter than sucrose (table sugar), Acesulfame K is often blended with other sweeteners usually sucralose or aspartame. These blends are reputed to give a more sugar like taste. This blend is sweeter than its components.

**Aspartame** - An artificial sweetener that is 200 times sweeter than sugar, without the high energy value of sugar. FDA officials described the safety of aspartame as "clear cut" and stated that the product is one of the most thoroughly tested and studied food additives the agency has ever approved. Aspartame is known by the U.S. brand names Equal and NutraSweet.

**Erythritol** - Natural sugar alcohol with no diuretic effects.

**Polydextrose**- Commonly used as a replacement for sugar, starch, and fat in commercial beverages, cakes, candies, breakfast cereals, and frozen desserts. It is frequently used as an ingredient in diabetic cooking recipes, and is a form of soluble fiber. Polydextrose is known by the U.S. brand names Litesse, Sta-Lite, and Trimcal.

**Sorbitol** - It is a sugar substitute used in diet foods. This includes diet drinks, ice cream, and sugar-free chewing gum and mints. It may be listed under the inactive ingredients. Lastly, it occurs naturally in many stone fruits and berries, such as nectarines!

**Sucralose** - Sucralose can be found in more than 4,500 food and beverage products. It is used because it is a no-calorie sweetener, does not promote dental decay, and is safe for consumption by diabetics. Sucralose is known by the U.S. brand name Splenda.

## You Rule

At Yogurtland, there's no such thing as small, medium or large. You determine your own serving size and choose as many flavors and toppings as you like — all priced per ounce. So whatever you're into, our message is the same. At Yogurtland, you rule.

*You already know  
it's better,  
but here's why...*

### Real Yogurt

Proprietary recipes  
made only by  
Yogurtland.

### Real Flavors

With real pistachios,  
real mango, real  
cookies, etc.

### Real Innovation

Surprising new flavors  
all the time.

Yogurtland's nutritional analysis is comprised of data from Brooker Laboratories, LLC, (an independent testing facility commissioned by Yogurtland) combined with data from our suppliers. Yogurtland attempts to provide nutrition information regarding its products that is as complete as possible. Variations may exist due to periodic changes in formulations. Some products may not be available at all locations. New product introduction, product changes or limited time only items may not be included in this publication. This publication is continuously updated in an attempt to reflect the current status of our products. All data is rounded to meet current US FDA NLEA guidelines.

Promotional and limited time only products are provided separately on [yogurt-land.com](http://yogurt-land.com)
